

## Margin Policy

### For the Text Below the Banner

Indices, the CFD Index The stock price index is an indicator that describes the change in the total price level of the stock market and can be used to measure the overall market for a particular market. In the DAM platform, you can trade 11 stock index CFD products with high liquidity in the global market, and you can buy or sell any stock index without actually holding them. There is no borrowing cost and there is no expiration.

### Use

At K.O.K Markets, we offer the most competitive margins across the entire range of assets. To trade seamlessly and keep your positions open, make sure you maintain the minimum required funds in your trading account.

### Types of Margin

Understanding the margin requirements can help you make informed trading decisions. There are two types of margins to keep in mind.

### Initial Margin

This is the minimum amount of funds required in your trading account to open a trading position.

## **Maintenance Margin**

This is the funds you need to maintain in your trading account to keep positions open as the asset price fluctuates. This is especially important when the market moves against you.

## **How to Calculate Your Margin Requirement**

The amount that you will need to maintain in your account will depend on the leverage you choose, your position size, the CFD contract size and the asset price at the time of opening the position.

Margin = (Position Size x Contract Size x Opening Price of Asset) / Leverage

## **Margin Call**

When the funds in your trading account fall below the minimum margin level required to keep a position open, you will receive a notification from us to deposit the required funds. This is called a margin call.

With appropriate risk management measures and setting custom alerts, you can ensure that your trading positions don't get closed out due to a lack of adequate funds.
